CARACTERISTICI PRINCIPALE

Sarma tubulara cuprata pentru sudarea intr-un singur strat sau in mai multe straturi. Randamentul de depunere este ridicat, fara stropi si cu un aspect al cordonului regulat chiar si pe table cu calamina. Recomandat in mod deosebit pentru utilizarea in constructii navale, in special in pozitia vertical ascendent, permitand realizarea unor cordoane de mici dimensiuni. Se poate suda folosind CO₂ de mare puritate. Este recomandat pentru sudarea otelurilor carbon de tipul Fe430 - Fe510, cu bune caracteristici de tenacitate pana la -20° C.

MAIN FEATURES

Rutile seamless copper coated cored wire, for welding metal constructions in single or multipass technique. Designed for high deposition rate welding, stable and low spattering arc characteristics. Easy slag removal and good bead appearance, even on oxidized plates. Particularly designed for shipbuilding applications, especially for vertical up welding, even without waving the torch in order to obtain small size beads. Shielding gas: CO₂. For welding carbon manganese steels like Fe 430 - Fe 510, with good impact properties down to -20° C.

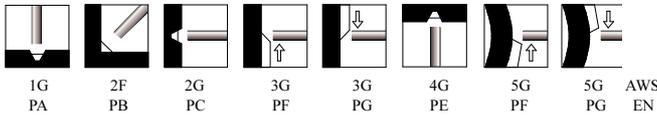

DOMENII DE APLICATIE

Constructii navale
Constructii feroviare si de material rulant
Masini agricole
Constructii de poduri, masini de decopertat, etc..

MAIN APPLICATIONS

Shipbuilding
Rolling stock construction
Agriculture machines
Bridge cranes, cranes, earth moving machines.
